

Irrigators will find McCrometer's RemoteCONNECT™ Telemetry System enhances irrigation by delivering up-to-date flow data via the Internet for centralized monitoring and control, which takes the guesswork out of water management and frees irrigators to focus on other critical tasks.

Flow data via the internet from
flow experts

The RemoteCONNECT System is a turn-key wireless remote monitoring system with 24/7 capability, which reduces costly manual data collection. McCrometer, the irrigation industry's most trusted flow meter supplier for 55 years, now provides a single go-to source for automated flow measurement system hardware, software, installation, training, support and field service. McCrometer's vast experience in flow metering and flow data combined with an understanding of irrigator's goals allowed us to design an expandable system to meet needs today and in the future.

Key features include:

- Save time with flow data available anytime from the Internet
- One stop shop total solution from the flow experts-McCrometer provides single-point-of-contact
- Affordable solution for multiple meter sites requiring only one satellite connection for every 25 meters
- Control equipment remotely saving valuable time
- Easy to install or retrofit with your existing McCrometer flow meters or those from other suppliers
- Durable against tampering and bad weather with heavy-duty materials and tamper-resistant security screws
